### Determining which is the higher number?

**Problem:** find the highest number between two given numbers.

If the 1<sup>st</sup> number is greater than the 2<sup>nd</sup> number then print “true” if not then print “false”

**Pseudocode:**

- Input two numbers
- Determine if the 1<sup>st</sup> number is greater than the 2<sup>nd</sup> number
- If the 1<sup>st</sup> number is greater than the 2<sup>nd</sup> number then print “true” if not then print “false”
